

## HIRING OPTIMISM WOBBLER IN THE EAST

### MANPOWERGROUP EMPLOYMENT OUTLOOK SURVEY REVEALS HIRING OPTIMISM IN THE EAST OF ENGLAND HAS FALLEN LEVEL WITH THE NATIONAL AVERAGE

- **Outlook of +5% for the region**
- **More unskilled vacancies than candidates**
- **Increase in older, skilled candidates means vacancies still hard to fill**

**13 JUNE 2017:** In the first employment survey to be published since the General Election, employers in the East of England have shown a decline in hiring optimism, according to ManpowerGroup, the world's workforce experts. The East of England Outlook has fallen for the first time in three quarters, down three points to +5%.

The ManpowerGroup Employment Outlook Survey is based on responses from 2,109 UK employers. It asks whether employers intend to hire additional workers or reduce the size of their workforce in the coming quarter. It is the most comprehensive, forward-looking employment survey of its kind and is used as a key economic statistic by both the Bank of England and the UK government.

Simon Edwards, Operations Director at Manpower, said: "While employer optimism has fallen compared to previous quarters, the level is still in line with the national average. This is fairly encouraging when looked at within the context of the political uncertainty around the General Election and Brexit negotiations."

"We are seeing a lot of job opportunities in warehouse positions, especially following Amazon's decision to expand its fulfillment centre in Cambridge. However, it has become increasingly difficult to fill these positions. More and more Eastern European workers who previously held warehouse positions are leaving the county and we have found that there has also been an increase in the number of older, more skilled candidates, looking for work. They tend to be overqualified for the positions on offer and so this skills mismatch has meant that there are more positions available than candidates suitable for the jobs."

Nationally, companies are demonstrating cautious optimism with an Outlook of +5%, despite a triple whammy of uncertainty over the last few months - a snap election, the triggering of Article 50, and weak economic data for the first half of 2017. Whilst on first glance the election uncertainty might appear unhelpful to employers, ManpowerGroup believes that the shock result could offer hope for businesses who had feared the impact of a hard Brexit on hiring.

James Hick, ManpowerGroup Solutions Managing Director: "You might have expected hiring confidence to have taken a real hit, but employers have been standing firm. However, unquestionably they feared the outcome of a hard Brexit on the jobs market. The election result throws into question the Conservative commitment to slash immigration to the "tens of thousands" and double the levy on non-EU workers to £2,000. The simple truth is that some

sectors will stall without skilled workers from overseas, which could result in the UK economy entering a tailspin.”

Hick continues: “People might be surprised to learn that in the last year 80,000 Bulgarians and Romanians entered the UK workforce, while the size of the UK-born workforce did not increase at all<sup>1</sup> – demonstrating just how accustomed we have become to a steady stream of labour from overseas. Slamming the door shut will leave us seriously exposed.”

It is a diverse picture across the regions this quarter. Yorkshire and Humber is top of the regional charts on +11%, its highest level since 2014. London is also riding high, with a five point jump this quarter, to +8%. It’s a mixed picture in the west: the West Midlands is up four points to +9%. But the South West is down three points to +1% (its lowest level since 2014), and the North West is also down three points to +3%. In the east of the country it’s also a pretty uneven picture: as well as the East of England, the North East is also in line with the national average (+5%) whereas the South East is up five points to +9%, but the East Midlands has slipped to +3%, its least optimistic outlook in over six years. Northern Ireland (+4%) and Scotland (+2%) are both below the national average and Wales is at the bottom of the regional table with an Outlook of 0%, the lowest level for the country since 2014.

**NOTES TO EDITORS**

A ‘Net Employment Outlook’ is calculated by subtracting those employers who plan to reduce staffing levels from those who plan to hire staff. A positive result indicates that more employers plan to increase rather than decrease staffing levels; a negative result reflects the opposite. [% increase - % decrease]

Commentary and full details on every sector and region can be found in the survey report at [manpowergroup.co.uk/meos](http://manpowergroup.co.uk/meos), or by calling the Press Office on 0207 404 5959/ [manpower@brunswickgroup.com](mailto:manpower@brunswickgroup.com)

For international comparisons and visual library with graphs, visit [manpowergroup.com](http://manpowergroup.com)

Commentary is based on seasonally adjusted data where available. Full survey results for each of the 42 countries and territories included in this quarter’s survey, plus regional and global comparisons, can be found in the ManpowerGroup Press Room at [www.manpowergroup.com/meos](http://www.manpowergroup.com/meos). In addition, all tables and graphs from the full report are available to be downloaded for use in publication or broadcast from the ManpowerGroup Web site at: <http://www.manpowergroup.com/press/meos.cfm>

Note that in Quarter 2 2008, the Survey adopted the TRAMO-SEATS model for seasonal adjustment of data. As a result, you may notice some seasonally adjusted data points change slightly from previous reports. This model is recommended by the Eurostat department of the European Union and the European Central Bank, and is widely used internationally.

**About the Survey**

The world leader in innovative workforce solutions, ManpowerGroup releases the Manpower Employment Outlook Survey quarterly to measure employers’ intentions to increase or decrease the number of employees in their workforce during the next quarter. It is the longest running, most extensive, forward-looking employment survey in the world, polling nearly 59,000 employers in 42 countries and territories. The survey serves as a bellwether of labour market trends and activities and is regularly used to inform the Bank of England’s Inflation Reports, as well as a regular data source for the European Commission, informing its EU Employment Situation and Social Outlook report the *Monthly Monitor*. ManpowerGroup’s independent survey data is also sourced by financial analysts and economists around the world to help determine where labour markets are headed.
